INTEREST & HOBBIES

FINAL YEAR PROJECT

Remote Message Application

Remote Message Application gives access to its users to access their messages on any location by just logging in their account at Remote Location.it collects all incoming messages from users default message app and stores them in database created on server. Remote Message Application is that the end user not only can access their messages on PC at any location but also can reply remotely. The replied messages will sent to Remote Message Application as a notification and as a result Remote Message Application will send the currently received message from end user`s personal cell phone to the specified contact number in reply.
